Mass Populate the Precode Page

Note: It is advised that you view the three precode videos (Overview, SPED, EOCEP) under *Accountability > Precode* on The Bookshelf website before entering data on the Precode page in PowerSchool.

This document is set up so that you can perform a search to identify students who have not had their Precode data entered or students that have had their Precode data enter and has a field set to a certain value.

For an example to enter Alternate Assessment with the internal database field name of "S_SC_STU_X.AltAssessCde". In the list below of fields and values is first the name of the field as it appears on the PowerSchool SC Precoder webpage, then comes the internal database field name that will be used to perform the "mass change" or to perform the student search and finally the values that appropriate and that are listed in the dropdown on the PowerSchool SC Precode webpage.

Again, the list below is organized in this order:
Field on Page
Database field used for Student Field Value
Value to be set – Value Meaning (*Do not enter anything after the* -)

It is very important that you only enter the value and not the value and the description. If you set a field to a certain value and when you go to the page you do not see the value being displayed on the web page then something did not go correctly and what was entered into the data field is not in the web page's set drop down list. Most fields are case sensitive and extra spaces do count.

GOOD

Student Field Value

	1 students are selected
Option	**Value**
Field To Change (Fields)	S_SC_STU_X.AltAssessCde
New Field Value	Y
	☐ Clear Field Value
	Insert * to use the current field value with the new field value.
Options	☐ Do not overwrite existing data.
	WARNING: This change is irreversible.
	Submit

BAD

Student Field Value

	1 students are selected
Option	**Value**
Field To Change (Fields)	S_SC_STU_X.AltAssessCde
New Field Value	Y - Yes
	☐ Clear Field Value
	Insert * to use the current field value with the new field value.
Options	☐ Do not overwrite existing data.
	WARNING: This change is irreversible.
	Submit

A search like the random ones listed below will select all students that have the default code set
S_SC_STU_X.CustomLEPRead = 0
S_SC_STU_X.AltAssessCde = N

A search like the random ones listed below will select all students that do not have the default code
S_SC_STU_X.CustomLEPRead **#** 0
S_SC_STU_X.AltAssessCde **#** N

Other Precode fields and their values
Where you see "*PLAIN TEXT*" are fields that you can enter anything it within reason. If you wanted to sort by Green for all the students testing in the Greenville area or 29402 for students testing in Charleston that would be fine. If this change and it does sometimes during the year the change will be in the Precode Manual updates. There are normally two updates every year and we will send them out when we are notified.
